# Annual Drinking Water Quality Report

#### GA2070001

#### FORSYTH

Annual Water Quality Report for the period of January 1 to December 31, 2024

This report is intended to provide you with important information about your drinking water and the efforts made by the water system to provide safe drinking water.

For more information regarding this report contact:

Name Craig Helms

hone (478)994-3423

FORSYTH is Surface Water

Este informe contiene información muy importante sobre el agua que usted bebe. Tradúzcalo ó hable con alguien que lo entienda bien.

# Sources of Drinking Water

resulting from the presence of animals or from human activity. surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the

EPAs Safe Drinking Water Hotline at (800) 426-4791 does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and
- discharges, oil and gas production, mining, or farming. Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses
- and can also come from gas stations, urban storm water runoff, and septic systems Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production,

Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities

systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water

Some people may be more vulnerable to contaminants in drinking water than the general population

concerns. For more information on taste, odor, or color of drinking water, please contact the system's business office. Contaminants may be found in drinking water that may cause taste, color, or odor problems. These types of problems are not necessarily causes for health

are available from the Safe Drinking Water Hotline (800-426-4791). or other immune system disorders, some elderly and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS

water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before from materials and components associated with service lines and home plumbing. We cannot control the variety of materials used in plumbing components. If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily

control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead from materials and components associated with service lines and home plumbing. We are responsible for providing high quality drinking water, but we cannot If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily

exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

### Coliform Bacteria

### Lead and Copper

#### Definitions:

Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow. Action Level Goal (ALG): The level of a contaminant in drinking water below which there is no known or expected risk to health. ALGs allow for a margin of safety.

Lead and Copper	Date Sampled	MCLG	Action Level (AL) 90th Percentile # Sites Over AL	90th Percentile	# Sites Over AL	Units	Violation	Likely Source of Contamination
Copper	08/18/2023	1.3	1.3	0.045	0	ppm	z	Erosion of natural deposits; Leaching from
								wood preservatives; Corrosion of household plumbing systems.

## Water Quality Test Results

Avg:

Definitions:

The following tables contain scientific terms and measures, some of which may require explanation.

Regulatory compliance with some MCLs are based on running annual average of monthly samples.

Maximum Contaminant Level or MCL: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment

found in our water system. A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been

The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety

A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum residual disinfectant level or MRDL:

Level 2 Assessment

Maximum Contaminant Level Goal or MCLG:

Level 1 Assessment:

## Water Quality Test Results

Maximum residual disinfectant level goal or MRDLG: The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

not applicable.

millirems per year (a measure of radiation absorbed by the body)

micrograms per liter or parts per billion - or one ounce in 7,350,000 gallons of water.

milligrams per liter or parts per million - or one ounce in 7,350 gallons of water.

ppm:

mrem: ppb: na:

Treatment Technique or TT: A required process intended to reduce the level of a contaminant in drinking water.

œ

### Regulated Contaminants

Discharge from chemical factories.	z	ppb	50	50	0 - 0.13	0.13	2024	Hexachlorocyclopentadiene
Likely Source of Contamination	Violation	Units	MCL	MCLG	Range of Levels Detected	Highest Level Detected	Collection Date	Synthetic organic contaminants including pesticides and herbicides
Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.	z	ppm	10	10	0.389 - 0.389	0.389	2024	Nitrate [measured as Nitrogen]
Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories.	z	ppm	4.0	4	1.07 - 1.07	1.1	2024	Fluoride
Discharge from steel and pulp mills; Erosion of natural deposits.	z	ppb	100	100	0.66 - 0.66	0.66	2024	Chromium
Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits.	z	ppm	2	2	0.0353 - 0.0353	0.0353	2024	Barlum
Likely Source of Contamination	Violation	Units	MCL	MCLG	Range of Levels Detected	Highest Level Detected	Collection Date	Inorganic Contaminants
By-product of drinking water disinfection.	z	ppb	80	No goal for the total	37.3 - 79.8	51	2024	Total Trihalomethanes (TTHM)
By-product of drinking water disinfection.	z	ppb	60	No goal for the total	18 - 37.6	29	2024	Haloacetic Acids (HAA5)
Water additive used to control microbes.	Z	ppm	MRDL = 4	MRDLG = 4	1-1	_	2024	Chlorine
Likely Source of Contamination	Violation	Units	MCL	MCLG	Range of Levels Detected	Highest Level Detected	Collection Date	Disinfectants and Disinfection By-Products

# PFAS Compounds UCMR5

Drinking water samples for PFAS compounds were collected on 8/12/24 and 8/13/24. Both PFOS and PFPeA compounds were detected in the drinking water. PFOS has an MCL of 4.ppt. PFOS was detected at levels of 4.5ppt and 6.1ppt. PFPeA has an MCL of 3.0ppt. PFPeA was detected at levels of 3.9ppt and 4.9ppt. Additional testing is currently being performed to determine if additional treatment is needed.

### Total Organic Carbon

The percentage of Total Organic Carbon (TOC) removal was measured each month and the system met all TOC removal requirements set, unless a TOC violation is noted in the violations section.

#### 2025 CCR Supplemental Lead and Copper CCR Information

#### For (GA2070001) Water System

Required Lead Language: Lead can cause serious health effects in people of all ages, especially pregnant people, infants (both formula-fed and breastfed), and young children. Lead in drinking water is primarily from materials and parts used in service lines and in home plumbing. The City of Forsyth is responsible for providing high quality drinking water and removing lead pipes but cannot control the variety of materials used in the plumbing in your home. Because lead levels may vary over time, lead exposure is possible even when your tap sampling results do not detect lead at one point in time. You can help protect yourself and your family by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Using a filter, certified by an American National Standards Institute accredited certifier to reduce lead, is effective in reducing lead exposures. Follow the instructions provided with the filter to ensure the filter is used properly. Use only cold water for drinking, cooking, and making baby formula. Boiling water does not remove lead from water. Before using tap water for drinking, cooking, or making baby formula, flush your pipes for several minutes. You can do this by running your tap, taking a shower, doing laundry or a load of dishes. If you have a lead service line or galvanized requiring replacement service line, you may need to flush your pipes for a longer period. If you are concerned about lead in your water and wish to have your water tested, contact City Hall at (478)994-5649. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at https://www.epa.gov/safewater/lead.

Lead and Copper Range Data.

Analyte	Date Sampled	MCLG	Action	Range		Units	Violation
			Level (AL)	Low	High		
Lead	8/17/23	0	15	0	1.5	ppb	NO
Copper	8/17/23	1.3	1.3	0	0.16	ppm	NO

To access all individual Lead Tap Sample results for the City of Forsyth, call Craig Helms at (478)994-3423 and copies of Individual Lead and Copper results can be given to you.

The Service Line Inventory (SLI) is a requirement under the Lead and Copper Rule Revisions (LCRR) to help water systems identify and replace lead service lines. It mandates that all public water systems develop and maintain an inventory of service line materials to assess the presence of lead and protect public health. The inventory will support proactive lead reduction efforts and ensure compliance with regulatory requirements to minimize lead exposure in drinking water.

To access the SLI for the City of Forsyth, please use the following link. This will connect you to the City of Forsyth's Public Transparency Dashboard (PTD): https://pws-ptd.120wateraudit.com/Forsyth-GA
